Future Plans

Engineer, Doctorate

Testing

SAT (March 2016 or after)

Evidence-based Reading and Writing	720	12/01/2018
Math	780	12/01/2018
Essay	18	10/06/2018
Taken	2	
Planned	0	
SAT Essay	Yes	

Leaving Exams

Mathematics	A	11/2018, Actual, KCSE
Physics	A	11/2018, Actual, KCSE
Chemistry	A	11/2018, Actual, KCSE
Computer Science	A	11/2018, Actual, KCSE
English	A	11/2018, Actual, KCSE
History & Government	A	11/2018, Actual, KCSE
Swahili	A	11/2018, Actual, KCSE

Activities

Athletics: Club

9, 10, 11, 12

Soccer, Assistant Captain

School

Reached and competed at the Nairobi County level, Won the school league three times

10 hr/wk, 42 wk/yr

Continue

Music: Instrumental

10, 11, 12

Personal Hobby

Break

Made several songs and uploaded them to SoundCloud, I have gotten recognition from my schoolmates and friends

40 hr/wk, 13 wk/yr

Continue

Writing

Personal Essay

Describe a topic, idea, or concept you find so engaging that it makes you lose all track of time. Why does it captivate you? What or who do you turn to when you want to learn more?

"The distinction between past, present, and future is only an illusion, even if a stubborn one." ~ Albert Einstein

It was during Christmas, the year 2015 when I first learned of this amazing concept: time. It was a tradition for my whole family to come together at my grandmother's house to celebrate. In the evening when everybody had left, I decided to go to my uncle's room and chat. I found a book called *About Time*, and I became glued to it. I sure am glad that happened.

The book's contents were mesmerizing. That time can be warped by motion and gravitation, and that it cannot be meaningfully divided into past, present, and future, fascinated me in a way that nothing else ever did. At first, I thought it was science fiction because it sounded so counter-intuitive. The fact that something so peculiar and awkward is actually true incessantly captivated me, and I devoured uncountable books and watched numerous documentaries to learn more about it. The more I researched, the more I understood, and the more I appreciated the mind-boggling concept.

I seize any chance I get to explain this concept to people, and the look on their faces after I'm done is priceless. As my speech borders on the incoherent due to my excitement, I narrate to them a story of two twin sisters, one of whom traveled to space and back, returning years younger than her twin owing to the effect motion and gravitation have on time. Over dinner, I successfully explained it to my mother, whose mind I sent reeling. She was so proud of me and encouraged me to continue learning. I feel so accomplished when I manage to convince people that time is not exactly what they thought it was.

Understanding this concept has transformed the way I think. I look at the stars at night and get lost in thought more often. It fires up my imagination and challenges me to think, "How can it be applied elsewhere?" "What are its limits?" One day, I believe, I will be able to answer these questions that fill my mind every waking moment, and my name will be alongside Einstein's as one of the drivers of scientific revolutions.

Even though my knowledge of the subject has proliferated over the years, I am limited by the fact that I am still a high school student. I can hardly wait for the day that I will be in a lecture hall, in the lab, or out there doing research, on this topic that I find so intriguing.

By the way - isn't it funny that I find thinking about *time* so fun that it makes me lose track of *time* itself?
