Dear admissions committee,

REF: RECOMMENDATION FOR WESLEY OSOGO ADMISSION NUMBER 11510

I write this recommendation in absolute support of Wesley Osogo for admission into your reputable school. I have known him for the past four years, a period in which I have served as his chemistry and biology teacher. In his final year, I was appointed as their class teacher which enabled me to get to know him more. In all my interactions with him, I have always been fascinated by the level of maturity, leadership, and commitment that he displays.

Wesley is never one to wait for others to take initiative. When he identifies a problem, he takes it head-on and tries resolutely to find a solution to it. In form three, their class was not getting enough time to do practicals in the science laboratories because of the imminent national examinations that necessitated the graduating class to get more time for preparation. He approached the laboratory technician and negotiated for his class to get extra time for practicals. I was marveled by the sense of initiative because none of the other students had attempted to do that. He was even entrusted with the key to the laboratories to enable them to have sessions during the night. I was not worried, because of his responsibility, I was sure he would maintain the class. I believe it is because of this that my class always led in the sciences. He would never demur from seeking help when he did not understand a concept. He recognizes that it takes extra effort to be excellent at something. He would always request for extra lessons in chemistry whenever he did not understand and as a result, he had excellent scores in class. He once shared with me that his philosophy is to get it done excellently or not at all and since the latter is an act of cowardice the only way is perfect.

His analytical skills are rigorous. Through careful observation, combined with sublime analysis, he was always able to draw perfect synthesis during the practical sessions. While many students barely noticed or cared to learn what different shades of the same color of titres meant, Wesley always noted such nitty-gritties and went ahead to find out why. He was never satisfied with the theoretical bit of studies, he wanted to see it practically happening. His love for detail is impressively amazing. This led him to have a thorough knowledge of the sciences; a subject I felt he was naturally drawn to.

What is even more impressive is that he takes what he learns to a higher level by seeking its practicality in day to day lives. It was not by surprise that he revived the science club in the school. He wrote a detailed proposal to the science department on how to run the club and the main idea was that learning things in class was of little use if students did not get the chance to apply the learned skills outside the classroom. The science club was one avenue to do so. He mobilized a few of his friends and they organized a science contest in the school which brought together national schools in the country. The event was profoundly successful. He remarkably set things running in the club and by the end of the year 2017, he was awarded the 'most active

club leader of the year' because of the exemplary performance of the club. He is a pioneer and an intelligent leader.

He was an active member of the robotics club and served as head of research in his final year. I was one of the teachers involved in the club and so I watched him come up with excellent ideas on several occasions. During a timed regional competition in 2017, he led his team to build an automated wheelchair that had rubber handles to prevent blisters on palms of the users. His team ended up winning the challenge. In annual Science and Engineering fairs, he came up with novel ideas such as maximizing production from cows by mixing of a variety of feeds. He harbors an unfathomable passion for using science as an avenue for effecting change. It was due to this fact that I was not hesitant to recommend him for admission into the Junior Academy of the New York Academy of Sciences. He was accepted into the academy and was one of the first two students in the history of the school to ever accomplish such a feat.

I will greatly miss Wesley's ingenuity and enthusiasm. His level-headed approach to all issues of life and his passion for using education as a tool to bring change to society. He epitomizes the type of student who will bring positive change in whatever environment he is in. It is because of this that I unreservedly recommend Wesley for admission into your great institution.

Yours faithfully,

ROSE SANGA

CLASS TEACHER
