Dear admissions committee,

RE: RECOMENDATION FOR JEFF MAINA GITAH

It would be a unique opportunity for me to bring to light the awesome and impeccable young man that is Jeff before you and ardently vouch for his passionate desire to be admitted to your university. I got to know Jeff during his four-year experience at Utumishi as his class teacher as well as his chemistry teacher and I can attest that he was truly one of those 'limited-edition' students that every teacher never forgets in their career.

My first encounter with Jeff was somewhat unique and strange and served as the spark that ignited me to identify him as a student of exceptional strengths and one who was going to make a difference. I remember it was during the admission day when they were joining the school and most of the students were shy and looking around in awe that was typical of most freshmen in our high school but Jeff stood out of the crowd. Jeff had this impertinent inquisitive nature that clearly displayed his zeal and excitement to be in this new environment. He particularly caught me unaware when he approached me and after exchanging pleasantries, he asked me with confidence on how one gets to become a leader in the school. This struck me as unusual and helped me see the determined, focused and go-getter attitude of Jeff right from the start.

Jeff, a somewhat born scientist, has an aptitude for sciences and chemistry became his stronghold. He has an internal urge that gives him the impetus to discover new concepts and having him in my class was a lively and fun experience. He has an active and insightful input in class and always wants to know why something happens how in a particular way. His intellectual interests made him explorative and he was always following up on concepts and ideas discussed in class. He would always volunteer for experiments during the lab lessons and at the same time eliciting the same interest he had to his fellow peers through his detailed explanation during the lessons whenever given the chance. Jeff has a unique approach of voicing his ideas for example by helping the students relate basic chemistry concepts such as molecular state of matter to real life situations using hilarious anecdotes that brought meaning and life to every lesson.

Jeff has a deep sense of social responsibility and he always states that his mental satisfaction and source of happiness is directly invoked from helping others learn. Jeff was that ever-present and vibrant participant in every group discussion and did not try to showcase his intellectual superiority but rather create a relaxed and relatable environment where peer teaching thrived. He volunteered to stay during the holidays with the academically weak students to participate in the remedial lessons out of sheer will and not circumstance. This was one of the intricate details of Jeff's life that made him outstanding and a blessing to any teacher that got to teach him.

Jeff was nicknamed 'Kabaka', which is a title given to kings in one of the local communities, by his peers. This was purposely due to his exceptional leadership skills and abilities that made him a favorite amongst his fellow peers. One time he shocked me by using the cash awards he received due to his academic consistency and he used it to create a class 'competition' whereby he rewarded his two classmates who improved their score by the largest range. This action struck me as selfless and showcased his deep love to motivate his class and impact positively on others. Teamwork to him was pivotal and the blood that pumped through his veins. His hard work resulted in the fact that the students he led emerged the best in the final exam out of the other five classes.

Jeff is an all rounded student and he showcased the same deep love, intricate abilities and sheer determination in all the fields that he was in. Whether it was in writing, science, peer teaching, school spirit or leadership; Jeff was the constant energetic fellow without limits to his imagination and the fun and lively character he reverberated were clearly visible. I would be tempted to call him a 'jack of all trades and a master of quite the lot.'

In my all my sincerity, I would, in a heartbeat, gladly take the chance to relive the experience of teaching this young game-changer over and over again if it were possible. It would be my pleasure to fully front him for admission to your university. I am deadbeat sure that Jeff would bring the "*King Midas*" touch to your university as he did to my class.

Sincerely,

Joel Amenya.

Chemistry teacher.

Utumishi Boys Academy.
