

To the admissions committee,

18th October 2023

Letter of Recommendation for Tony Rotich Odhiambo.

I am delighted to recommend Tony Rotich Odhiambo for admission to your esteemed university. I have known Tony for two years since I started teaching him Chemistry in form 3 (Junior year) and I have taught him until the end of his high school studies.

In my capacity as his Chemistry teacher and Head of the Chemistry Department at Light Academy Nairobi, I have worked closely with him and we have interacted on 4 weekdays every week. This extensive engagement has afforded me the opportunity to know him better. He is, without a doubt, one of the most remarkable students I have taught over the course of my professional life spanning various schools.

From our first encounter, I knew that he was an outlier. As I taught habitually challenging topics such as organic chemistry, I observed that his acumen was a par above the rest. He even made reference to challenging national examination questions after I had introduced the concepts. This scenario played like a soundtrack on repeat even when more complex concepts were being taught. His keen insight also enabled him to solve baffling questions given his granular attention to detail. Granted, he developed a peerless command of the subject

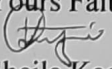

Tony is an amiable and outgoing class leader. He repeatedly exceeded my expectations and often volunteered to tutor his fellow classmates on difficult concepts after school hours. One memorable example is when he sacrificed time meant to prepare for an important chess tournament to tutor his classmates on how to calculate energy changes during chemical reactions. Remarkably, he was still at the top of his game during the tournament. Over time his liking for the subject evolved into a mission; aiding his classmates' collective comprehension.

Tony's leadership enhanced his sense of responsibility. He grasped the importance of meeting deadlines and due dates for assignments and pushed his class to have a similar drive to strive for excellence. He was not deterred even in the face of adversity. Earlier in 2023, he missed almost a month or more of school because he was attending international mathematics olympiads in Japan and Rwanda. In class, I covered about 3 major topics namely radioactivity, electrochemistry, and organic chemistry (II) in his absence, which initially was of great concern to me.

However, he made sure to keep abreast of everything while abroad. He requested I send him notes and questions to study on his own. Upon his return, he was the same brilliant student he was. This made me realize that he was destined for grand success in the end.

It is for these reasons that I highly recommend Tony Rotich Odhiambo for admission to your university.

Yours Faithfully,

Sheila Kadenyeka,

Head of Chemistry Department at Light Academy
