RE: RECOMMENDATION FOR EZRA SIKUTA KIZITO- ADMISSION NO. 9093

Having tracked Ezra's development both in and outside the classroom, I find great joy in advocating for him to join your institution. Ezra was a phenomenal student who brought out the best in those around him, including myself.

In class, Ezra's proficiency in math was unmatched. He loved playing around with numbers and constants, and variably used ingenious and unconventional methods to work out Mathematics problems, but the result was always the same: the correct answer. Ezra relished a challenge and regardless of how tough the problem was or how long it took, he always managed to solve it. Yet even with his obvious skill, he rarely grew complacent and sought to expand his knowledge in math as he would explore far beyond the curriculum to supplement what I taught in class. I always felt that his presence in my lessons inspired me to go deeper into what I was teaching, much to the benefit of the class. Furthermore, his approachable nature made it easy for his peers to learn from him. One of his distinct habits was that after Mathematics competitions, he always brought back a copy of the questions that were asked, and would revise it with his classmates. His primary goal was to help everyone he could to understand the subject he loved better, and this positivity undoubtedly spread to the whole class.

As leader of our school's math team, Ezra was nothing short of remarkable. During one Mathematics competition hosted at our school, I met with the team. I found Ezra speaking with each one of them, reassuring and motivating them to work for victory. The inspiration that he engendered that day was evident in the results; the team got first place, and Ezra placed second overall on an individual level. According to his teammates, this was something Ezra did all the time, which I found very impressive.

My relationship with Ezra extended beyond math. I took keen interest in his all-round academic performance, and would advise him appropriately. He was receptive to my input and looked to improve on his strengths and weaknesses alike. We also met frequently during lunch breaks and other free periods where we would have interesting discussions on various topics, from politics to sports to culture. Ezra never shied away from a debate and often spoke his mind. When time allowed, we leisurely played chess games during the weekends, and it was during one when we conceived the idea of reviving the dormant chess club. Afterwards, Ezra mobilised a group of about fifteen students with whom they worked to mobilise a fully-fledged chess team. He coordinated with me to have the club registered and also organized meetings. Today, the club has grown to forty members, but Ezra's legacy in this team will last for a long time.

As Ezra transitions into college, I am confident that he will continue to be a remarkable student with an outstanding personality. Should you require additional information from me regarding Ezra's personality and abilities, please do not hesitate to get in touch as you consider him for admission to your institution.

Yours faithfully,

James Oloo Mboya (Mr.),
Teacher of Mathematics and Patron of the Chess Club.
