Dear Admissions Committee,

RE: RECOMMENDATION FOR JOAN NEKOYE OMUKAGA

Joan Nekoye stood at the forefront of inspiring students all through her time in high school and continues to stand even after her departure. I got to interact with her as her class teacher and teacher of math for 4 years and I can attest that from her first day in school, she expressed a great desire to learn. She was keen to find out which classes they would be taking, interact with her classmates and even join clubs, all within the first week!

Over time, I got to realize that Joan was not your typical student. Although she was two years younger than her classmates, she was the most well-spoken and engaging student in the classroom, often cracking jokes and making mathematical puns to lift people's spirits during 3-hour math lessons.

It was evident that she was a bright student who often grasped concepts quicker than other students and was selfless with knowledge. I remember one evening when I was on duty, I met two First-year students walking to the Senior classes and on inquiry, they told me they were going to see Joan Nekoye for assistance with some math and physics assignment. I was very proud of her accommodative nature toward the students and soon the trend of upperclassmen assisting juniors began catching on within the school. Important to note is that that year Joan led the school to claim first place at a national math contest as she won in the senior category while the girls she was tutoring both placed in the top 10 in the junior category.

Joan was one of those students who didn't wait for changes to happen but was often the one who made changes happen. She had a certain "thinking without a box" mentality when it came to the way she expressed her ideas and that made her stand out among her peers. At one point after a prize-giving parade at the end of the term, she asked me during a class meeting why it was only academic achievers that were considered for prizes yet other people were also achieving in extra-curricular activities. At the end of that meeting, I recall her writing on the chalk wall the quote, "Do not judge a fish by its ability to climb a tree otherwise it'll spend its whole life thinking it's useless." to emphasize her point on people having different abilities. I was moved by this gesture and immediately began supporting her petition for unbiased awarding of students, which became successful in influencing the reform within the same year.

I believe Joan would be an indispensable part of your institution and hereby strongly recommend her for admission into your undergraduate program.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'Bonface Waswa'.

Mr. Bonface Waswa

HEAD OF MATHEMATICS DEPARTMENT.
