20th September, 2017**RE: RECOMMENDATION FOR**

Dear Sir/Madam,

I have known Tracy for three years now as her club patron. Our first personal encounter was when she and a small group of friends approached me with an idea they had: starting an aviation club in the school. Being the head of the Physics department in the school, they wanted me to be the patron of their club. Tracy's reason for wanting to be a founding member of this club struck me. She thought that the aviation industry lacks enough females, particularly pilots, and she wanted to change that in whatever small way she could. She also wanted to spread awareness of the scholarship options available which could make an aviation education affordable since most people do not know about such opportunities. Interestingly, she told me about the passion she had for the field of engineering and that she had once considered working in the aviation industry and therefore she desired to be a force of change.

Tracy went ahead to be the Chairperson of the club and I must say, working with her was quite an experience. Tracy is a self-driven leader. She would work together with her fellow club members to look for established professionals in the aviation industry who were willing to come and interact with the girls. Outsourcing for such professionals was quite a tough task as it was hard to find a time that worked for both them and the school. Tracy however managed to organize such a session at least once in a month. Occasionally, she also organized for the members of the club to go on outings to the East African School of Aviation to interact with experts in this field. I remember speaking to some members of the committee that determined the usefulness of clubs in the school right after the club was formed and Tracy was called to present her case. One of them said, "This young lady can really stand for what she believes in. She has convinced us all beyond reasonable doubt that we need such a club to be a force of change in such an important yet neglected field." She managed to convince the committee to fund the activities of the club. I can confidently say that I saw Tracy give this club her all.

The maturity that Tracy displayed in carrying out her activities was very commendable. For instance, it was mostly not possible for all the members of the club to attend the out-of-school events for one reason or another. As the chairperson, she was often faced with the task of deciding who was to attend which function. She took into consideration a lot of factors such as who had been showing consistent interest in the activities of the club and who had had the least exposure. Her decisions were, to say the least, just. She often went to the extent of giving up her own chance for someone who needed it more.

Despite the busy schedule during her fourth-year due to preparations for her national exams, Tracy still set aside time for the activities of the club. Through her actions, I got to witness exemplary mentorship from leaders to members who eventually went on to become leaders. She took time to guide the incoming chairperson and only left after she was certain that her successor was comfortable enough to

carry out the tasks required of her. This was unlike other clubs I had seen or even worked with in the school whereby no one cared enough to induct the incoming club leaders. Through our weekly two-hour meetings, I established that right from the start, Tracy had aimed to have this not just as a club but more like a community of young women interested in nurturing their love for Physics and aviation.

I believe that Tracy will be an essential addition to your institution. She possesses great analytical skills which will be further nurtured in your institution. She also demonstrated tremendous effort and growth throughout her tenure and had a combination of positive attitude and strength of mind which I believe will be a great addition to your institution. I therefore strongly recommend that you admit her into your school.

Sincerely,

Mr. Lawrence Wachira
Head of Physics Department, The Kenya High School.
